PROFESSIONAL SUMMARY

Aspiring Cybersecurity Analyst with a strong foundation in network security, Linux, Python, vulnerability assessment, and security analysis. Experienced in building AI-powered applications and automation tools. Familiar with Wireshark, security tools, and cybersecurity best practices. Seeking an entry-level role in SOC operations or cybersecurity engineering to contribute technical skills and continue growing in a dynamic security team.

TECHNICAL SKILLS

PROGRAMMING

- Python
- SQL (Basic)

OPERATING SYSTEMS

- Linux (Ubuntu, Kali)
- Windows

NETWORKING

- TCP/IP • DNS • HTTP/HTTPS
- Network Security Fundamentals

CYBERSECURITY

- Vulnerability Assessment
- Web Security
- Security Analysis
- Incident Response Fundamentals
- OWASP Top 10
- Cybersecurity Fundamentals

SECURITY TOOLS

- Wireshark • Nmap • Burp Suite (Basic)
- Kali Linux • Git & GitHub

AI & DEVELOPMENT

- Agentic AI • Generative AI
- Machine Learning Fundamentals

TOOLS

- Wireshark
- Nmap
- Burp Suite
- Kail Linux
- Git
- VS Code
- GitHub
- Python
- Linux
- Windows
- Jupyter Notebook

SOFT SKILLS

- Problem Solving
- Analytical Thinking
- Communication
- Team Collaboration
- Adaptability
- Documentation

EDUCATION

Bachelor of Computer Applications (BCA)
BS Anangpuria School of Management and Technology, Alampur
Aug 2025 – Present

LANGUAGES

- English
- Hindi

PROJECTS

1. Hex – Intelligent AI Desktop Voice Assistant — Python | Apr 2025

- Developed a Python-based voice assistant supporting 20+ voice commands to automate daily computer tasks including file handling, web searches, application control, and information retrieval.
- Integrated voice recognition and command processing with 95% accuracy for seamless system interaction.
- Designed modular architecture for scalability, improved performance by 30%, and optimized user experience.
- Focused on automation, productivity improvement, and accessibility.

2. AuthenticAI – Real-Time Deepfake Detection System — Python, ML, AI | May 2025

- Built an AI-powered deepfake detection tool that analyzes live video input and detects manipulated content with 92% accuracy.
- Implemented machine learning and computer vision techniques for frame extraction, feature analysis, and classification.
- Created a user-friendly interface with real-time results and confidence score visualization.
- Promotes digital media authenticity and awareness against deepfake threats.

3. AI Face Swap Research Platform (Educational & Security Testing) — Python, AI | Jun 2025

- Developed an AI-based face swapping platform for research and educational purposes.
- Implemented deep learning models and image processing techniques to swap faces in images and videos with high realism.
- Explored model optimization and performance tuning for better accuracy and efficiency.
- Conducted extensive testing on multiple datasets to evaluate performance and output quality.

4. Secure Pass System for Students and Faculty (Ongoing) — Python, Flask, DB | Ongoing

- Designing and developing a secure digital pass management system for students and faculty.
- Implementing authentication, authorization, and role-based access control to ensure secure pass generation and validation.
- Building features for pass requests, approvals, history tracking, and notifications.
- Focused on security, efficiency, and scalability to meet institutional requirements.

CERTIFICATIONS

- Cisco Networking Academy Cybersecurity Junior Analyst — May 2025
- Cisco Networking Academy Networking Fundamentals — Apr 2025
- Cisco Networking Academy Introduction to IoT — Mar 2025
- Ethical Hacking Intermediate — May 2025
- TATA Forage Cybersecurity Analyst Job Simulation — Feb 2025
- Computer Hardware — Jan 2025

ACHIEVEMENTS

- Built 4+ Python-based projects in AI, cybersecurity, and automation.
- Developed a real-time deepfake detection system using AI and Machine Learning.
- Continuously learning and applying cybersecurity best practices through hands-on projects.
- Strong focus on problem-solving, security analysis, and secure software development.
