TILAK KUMAR

CYBERSECURITY & AI ENGINEER | PYTHON | SECURITY ANALYSIS | COMPUTER VISION

+91 9220725303 | tilakkumar4956@gmail.com | Faridabad, Haryana, India
LinkedIn: linkedin.com/in/tilak-kumar-722a76405 | GitHub: github.com/tilaksecured

PROFESSIONAL SUMMARY

BCA student focused on cybersecurity, AI applications, and Python development, with hands-on project experience across computer vision, desktop automation, and secure digital workflows. Foundational knowledge of network security, web application security, vulnerability assessment, Linux, and security analysis. Familiar with Wireshark, Nmap, Burp Suite (basic), Kali Linux, Git, and GitHub. Participated in virtual cybersecurity internship programs with Deloitte and Tata. Seeking an internship or entry-level opportunity in cybersecurity, security engineering, SOC operations, or AI security.

TECHNICAL SKILLS

Programming: Python; SQL (basic); JavaScript (project exposure)
Cybersecurity: Vulnerability Assessment; Web Application Security; OWASP Top 10; Security Analysis; Incident Response Fundamentals; Authentication; Authorization; Role-Based Access Control (RBAC)
Networking: TCP/IP; DNS; HTTP/HTTPS; Network Security Fundamentals; Network Traffic Analysis
Security Tools: Wireshark; Nmap; Burp Suite (basic); Kali Linux
Platforms & Development: Linux; Ubuntu; Windows; Git; GitHub; Visual Studio Code; Jupyter Notebook
AI & Computer Vision: Generative AI; Agentic AI; Machine Learning Fundamentals; Computer Vision; OpenCV

VIRTUAL INTERNSHIP EXPERIENCE

Deloitte | Cybersecurity Virtual Internship
Tata | Cybersecurity Virtual Internship

PROJECTS

AuthenticAI — Real-Time Deepfake Detection System
Python | *AI/ML* | *Computer Vision* | *OpenCV*
• Built an application designed to analyze video input and identify potentially manipulated media.
• Implemented video-frame extraction and computer-vision techniques to support deepfake detection and media-authenticity analysis.
• Created an interface to display detection results and confidence scores; explored real-time media analysis and model-performance optimization.

HEX — Intelligent AI Desktop Voice Assistant
Python | *Voice Recognition* | *Desktop Automation*
• Developed a Python-based voice assistant to automate desktop tasks through voice commands.
• Implemented command-processing functionality for application control, file handling, and web searches.
• Designed a modular architecture to support maintainability and future automation features.

SmartPass Pro — Secure Digital Pass Management System
JavaScript | *Node.js* | *Express.js* | *Socket.IO* | *PostgreSQL* | *JWT*
• Designed a digital pass-management system for student, faculty, and administrative workflows.
• Implemented role-based workflows for administrators, principals, teachers, students, and security personnel.
• Developed pass requests, approvals, status tracking, and QR-based verification workflows, with a focus on authentication, authorization, and auditability.

AI Face Swap Research Platform
AI | *Deep Learning* | *Image Processing* | *Computer Vision*
• Explored AI-based face-swapping techniques for educational research and computer-vision experimentation.
• Investigated image/video processing, model performance, inference efficiency, and output quality.
• Reviewed security implications of facial manipulation, including synthetic-media misuse and deepfake detection.

EDUCATION

Bachelor of Computer Applications (BCA) | 2025–Present
B.S. Anangpuria School of Management and Technology, Alampur, Haryana

CERTIFICATIONS

• Cisco Networking Academy — Cybersecurity Junior Analyst (May 2025)
• Cisco Networking Academy — Networking Fundamentals (April 2025)
• Cisco Networking Academy — Introduction to IoT (March 2025)
• Ethical Hacking Intermediate (May 2025)
• Cybersecurity Analyst Job Simulation (February 2025)
• Computer Hardware (January 2025)

ADDITIONAL INFORMATION
